

Water in Organic Synthesis: Table of Contents

Water in Organic Synthesis

Shu Kobayashi

1 General Introduction

2 Structure and Properties of Water

3 Aqueous Media: Reactions of Carbon—Carbon Multiple Bonds

3.1 Dihydroxylation/Aminohydroxylation/Diamination, Epoxidation, Aziridination

3.2 Hydrogenation of Alkenes, Alkynes, Arenes and Heteroarenes

3.3 Hydroboration and Hydrosilylation, Carbometallation, Hydrocyanation, Hydrocarbonylation, Hydroformylation, Hydroacylation, Hydrovinylation and Hydroarylation, Hydroamination and Hydrophosphinylation of Carbon—Carbon Double Bonds

3.4 Conjugate Addition Reactions (Michael; C-, O-, S- and N-Nucleophiles)

3.5 Cyclopropanation Reactions

3.6 Metathesis Reactions

4 Aqueous Media: Reactions of Carbonyl and Imino Groups

4.1 Reduction of Carbonyl Groups and Imino Groups

4.2 Alkylation, Allylation and Benzoylation of Carbonyl and Imino Groups

4.3 Arylation, Vinylation and Alkynylation of Carbonyl and Imino Groups

4.4 Hydrocyanation, Cyanosilylation and Hydrophosphinylation of Carbonyl and Imino Groups

4.5 Aldol Reaction

4.6 Mannich Reaction (incl. Nitro—Mannich Reactions, aza-Baylis—Hillman Reaction) and Baylis—Hillman Reaction

5 Aqueous Media: Cyclization, Rearrangement, Substitution, Cross Coupling, Oxidation and Other Reactions

5.1 Cycloaddition and Cyclization Reactions

5.2 Pericyclic Reactions (Sigmatropic Rearrangements and Electrocyclic Reactions), Rearrangements and Ene Reaction

5.3 Substitution Reactions, including Allylic Substitution Reactions and Aromatic Substitution (C—C, C—N, C—O, C—S, C—Hal)

5.4 Cross-coupling and Heck Reaction

5.5 Ring Opening of Epoxides, Aziridines and Cyclic Anhydrides (incl. desymmetrizations)

5.6 α -Functionalization of Carbonyl Compounds and Alkylation and Arylation of Enolates

5.7 Acylation of Alcohols and Amines and Hydrolysis of Carboxylic Acid Derivatives

5.8 Oxidation of Alcohols, Allylic and Benzylic Oxidation, Oxidation of Sulfides

5.9 Free Radical Reactions

5.10 Polymerization

6 Special Techniques with Water

6.1 Aqueous Biphasic Systems

6.2 "On Water"

6.3 Supercritical Water

6.4 Nearcritical Water (NCW)

6.5 β -Cyclodextrin Chemistry in Water

7 Industrial Application

7.1 Hydroformylation

7.2 2nd Industrial Chapter

8 Future Perspectives
