

**Volume 46:
1,3-Dienes**

	Preface	V
	Table of Contents	IX
	Introduction	
	V. H. Rawal and S. A. Kozmin	1
46.1	Synthesis Using the Wittig and Related Phosphorus-, Silicon-, or Sulfur-Based Reactions	
	A. D. Abell and M. K. Edmonds	23
46.2	Synthesis by Alkylidenation with Metal–Carbene Complexes and Related Reagents	
	T. Takeda and A. Tsubouchi	63
46.3	Synthesis by Alkene Metathesis	
	S. T. Diver	97
46.4	Synthesis by Aldol and Related Condensation Reactions	
	K. P. C. Minbiole	147
46.5	Synthesis by Metal-Mediated C–C Bond Forming Reactions of Alkynes, Diynes, and Enynes	
	V. Gandon, S. Thorimbert, and M. Malacria	173
46.6	Synthesis by Metal-Mediated Coupling Reactions	
	E. Negishi and G. Wang	239
46.7	Synthesis by Cycloaddition and Electrocyclic Reactions	
	M. Shindo, T. Yoshikawa, and K. Yaji	353
46.8	Synthesis by Extrusion	
	R. S. Grainger and P. J. Jervis	401
46.9	Synthesis by Elimination	
	M. P. Schramm	445
46.10	Synthesis by Reduction	
	D. J. Ramón and M. Yus	523
46.11	Synthesis by Isomerization of Unconjugated Dienes, Allenes, Alkynes, and Methylenecyclopropanes	
	R. E. Taylor, C. R. Diène, and E. M. Daly	549

46.12	Synthesis from Arenes and Polyenes Y.-S. Wong	589
46.13	Synthesis via Metal Complexes of Dienes I. Bauer and H.-J. Knölker	637
	Keyword Index	669
	Author Index	711
	Abbreviations	739

Table of Contents

Introduction

V. H. Rawal and S. A. Kozmin

	Introduction	1
46.1	Synthesis Using the Wittig and Related Phosphorus-, Silicon-, or Sulfur-Based Reactions A. D. Abell and M. K. Edmonds	
46.1	Synthesis Using the Wittig and Related Phosphorus-, Silicon-, or Sulfur-Based Reactions	23
46.1.1	The Wittig Reaction	24
46.1.1.1	Method 1: Synthesis from Phosphorus Ylides and Enones or Enals	24
46.1.1.1.1	Variation 1: From Stabilized Ylides	25
46.1.1.1.2	Variation 2: From Nonstabilized Ylides	27
46.1.1.2	Method 2: Synthesis from Allyl Phosphorus Ylides and Carbonyl Compounds	30
46.1.1.3	Method 3: Synthesis by Tandem Oxidation–Wittig Reaction	34
46.1.1.3.1	Variation 1: Simultaneous Diene Formation	35
46.1.1.3.2	Variation 2: Sequential Diene Formation	35
46.1.2	The Horner–Wittig Reaction	37
46.1.2.1	Method 1: Synthesis from Phosphine Oxides and Enals	38
46.1.2.2	Method 2: Synthesis from Alkenylphosphine Oxides and Aldehydes or Ketones	38
46.1.3	The Horner–Wadsworth–Emmons Reaction	39
46.1.3.1	Method 1: Synthesis from Phosphonates and Enones or Enals	40
46.1.3.1.1	Variation 1: The Ando Method	42
46.1.3.1.2	Variation 2: The Still–Gennari Modification	43
46.1.3.2	Method 2: Synthesis from Alkenylphosphonates and Carbonyl Compounds	44
46.1.3.2.1	Variation 1: The Still–Gennari Modification	46
46.1.4	The Peterson Reaction	46
46.1.4.1	Method 1: Synthesis from α,β -Unsaturated Carbonyl Compounds and Alkylsilanes	47
46.1.4.2	Method 2: Synthesis from Carbonyl Compounds and Allylsilanes	49
46.1.4.3	Method 3: The Vinylogous Peterson Elimination	53
46.1.5	The Julia Reaction and Its Variations	54
46.1.5.1	Method 1: Synthesis from α,β -Unsaturated Carbonyl Compounds and Alkyl Sulfones	55
46.1.5.2	Method 2: Synthesis from Carbonyl Compounds and Allyl Sulfones	57

46.1.5.3	Method 3: The Keck Variation	59
46.2	Synthesis by Alkylidenation with Metal–Carbene Complexes and Related Reagents T. Takeda and A. Tsubouchi	
46.2	Synthesis by Alkylidenation with Metal–Carbene Complexes and Related Reagents	63
46.2.1	Methylenation	63
46.2.1.1	Method 1: Synthesis Using Titanium-Based Reagents	63
46.2.1.1.1	Variation 1: Using the Tebbe Reagent	63
46.2.1.1.2	Variation 2: Using Bis(η^5 -cyclopentadienyl)(dihalozinc)(μ -methylene)-titanium	68
46.2.1.1.3	Variation 3: Using Bis(η^5 -cyclopentadienyl)dimethyltitanium(IV) (The Petasis Reagent)	69
46.2.1.1.4	Variation 4: Using Titanacyclobutenes	72
46.2.1.2	Method 2: Synthesis Using Zinc-Based Reagents	73
46.2.1.3	Method 3: Synthesis Using Miscellaneous Reagents	77
46.2.2	Halomethylenation and Related Reactions	79
46.2.2.1	Method 1: Synthesis Using Titanium-Based Reagents	80
46.2.2.2	Method 2: Synthesis Using Zinc-Based Reagents	81
46.2.2.3	Method 3: Synthesis Using Chromium-Based Reagents	82
46.2.3	Other Alkylidenation Reactions	87
46.2.3.1	Method 1: Synthesis Using Titanium-Based Reagents	87
46.2.3.2	Method 2: Synthesis Using Zinc-Based Reagents	90
46.2.3.3	Method 3: Synthesis Using Chromium-Based Reagents	91
46.2.3.4	Method 4: Synthesis Using Miscellaneous Reagents	92
46.3	Synthesis by Alkene Metathesis S. T. Diver	
46.3	Synthesis by Alkene Metathesis	97
46.3.1	Method 1: Ring-Closing Metathesis of Enynes	102
46.3.1.1	Variation 1: Using Grubbs' Catalysts	102
46.3.1.2	Variation 2: Polycyclization Using Grubbs' Catalysts	107
46.3.1.3	Variation 3: Using the Hoveyda–Blechert Catalyst	112
46.3.1.4	Variation 4: Polycyclization Using the Hoveyda–Blechert Catalyst	114
46.3.1.5	Variation 5: Using the Schrock Catalyst	115
46.3.2	Method 2: Ring-Closing Metathesis of Alkenes with Conjugated Dienes	118
46.3.3	Method 3: Cross Metathesis of Alkynes with Alkenes	121
46.3.3.1	Variation 1: Metathesis of Alkynes with Ethene	121
46.3.3.2	Variation 2: Metathesis of Terminal Alkynes with Other Acyclic Alkenes	125
46.3.3.3	Variation 3: Metathesis of Internal Alkynes with Acyclic Alkenes	129
46.3.3.4	Variation 4: Ethene-Assisted Metathesis	130

46.3.3.5	Variation 5: Metathesis of Alkynes with Cycloalkenes	131
46.3.4	Method 4: Cross Metathesis of Alkenes with Conjugated Dienes	135
46.3.5	Method 5: Cross Metathesis of Alkenes Followed by Elimination	140
46.3.6	Method 6: Ring-Rearrangement Metathesis	141
46.4	Synthesis by Aldol and Related Condensation Reactions K. P. C. Minbiole	
46.4	Synthesis by Aldol and Related Condensation Reactions	147
46.4.1	Synthesis of 1,3-Dienes with an Electron-Withdrawing Group at C1	148
46.4.1.1	Method 1: Formation of the α,β -Alkene	148
46.4.1.1.1	Variation 1: Under Basic Conditions with Thermodynamic Control	149
46.4.1.1.2	Variation 2: Under Kinetic Conditions with Subsequent Elimination	150
46.4.1.1.3	Variation 3: Under Lewis Acidic Conditions	151
46.4.1.1.4	Variation 4: Other Approaches	153
46.4.1.2	Method 2: Formation of the γ,δ -Alkene	153
46.4.1.2.1	Variation 1: Driven by Extended Conjugation	154
46.4.1.2.2	Variation 2: Lactone Formation	154
46.4.1.2.3	Variation 3: Other Reactions	156
46.4.2	Synthesis of 1,3-Dienes with an Electron-Withdrawing Group at C2	158
46.4.2.1	Method 1: Formation of the α,β -Alkene	158
46.4.2.1.1	Variation 1: Single-Step Reactions	159
46.4.2.1.2	Variation 2: Multistep Reactions	159
46.4.2.1.3	Variation 3: Other Strategies	160
46.4.3	Synthesis of 1,3-Dienes with Two Electron-Withdrawing Groups at C1	160
46.4.3.1	Method 1: Formation of the α,β -Alkene	161
46.4.3.1.1	Variation 1: Under Standard Basic Conditions	161
46.4.3.1.2	Variation 2: Using Alternative Promoters	162
46.4.3.1.3	Variation 3: From Non-Ester Substrates	162
46.4.3.2	Method 2: Formation of the γ,δ -Alkene	163
46.4.4	Synthesis of 1,3-Dienes with Electron-Withdrawing Groups at C1 and C3	164
46.4.4.1	Method 1: Knoevenagel and Related Condensations	165
46.4.5	Synthesis of 1,3-Dienes with Electron-Withdrawing Groups at C2 and C3	166
46.4.5.1	Method 1: Single Stobbe Reaction	166
46.4.5.2	Method 2: Double Stobbe Reaction	167
46.5	Synthesis by Metal-Mediated C—C Bond Forming Reactions of Alkynes, Diynes, and Enynes V. Gandon, S. Thorimbert, and M. Malacria	
46.5	Synthesis by Metal-Mediated C—C Bond Forming Reactions of Alkynes, Diynes, and Enynes	173
46.5.1	Acyclic 1,3-Dienes	173

46.5.1.1	Method 1:	Nickel-Catalyzed Aldehyde–Alkyne and Aldehyde–Enyne Coupling	173
46.5.1.1.1	Variation 1:	Nickel-Catalyzed Aldehyde–Alkyne Coupling	173
46.5.1.1.2	Variation 2:	Nickel-Catalyzed Aldehyde–Enyne Coupling	174
46.5.1.2	Method 2:	Coupling of Alkynes	175
46.5.1.2.1	Variation 1:	Titanium-Mediated Carbometalation of Internal Alkynes	176
46.5.1.2.2	Variation 2:	Zirconium-Mediated Carbometalation of Alkynes	177
46.5.1.2.3	Variation 3:	Ruthenium-Catalyzed Dimerization of Propargyl Alcohols	180
46.5.1.3	Method 3:	2:1 Co-oligomerization of Alkynes and Alkenes	181
46.5.1.3.1	Variation 1:	Cobalt-Mediated C–H Activation	181
46.5.1.3.2	Variation 2:	Nickel-Mediated C–H Activation	182
46.5.2		Endocyclic 1,3-Dienes	183
46.5.2.1	Method 1:	Synthesis via Zirconacyclopentadienes	183
46.5.2.2	Method 2:	Six-Membered Rings by [2 + 2 + 2] Cycloaddition	185
46.5.2.2.1	Variation 1:	Titanium-Catalyzed Cycloaddition	186
46.5.2.2.2	Variation 2:	Zirconium-Mediated Cycloaddition	186
46.5.2.2.3	Variation 3:	Ruthenium-Catalyzed Cycloaddition	187
46.5.2.2.4	Variation 4:	Cobalt-Mediated Cycloaddition	190
46.5.2.2.5	Variation 5:	Rhodium-Catalyzed Cycloaddition	197
46.5.2.2.6	Variation 6:	Iridium-Catalyzed Cycloaddition	201
46.5.2.2.7	Variation 7:	Nickel-Catalyzed Cycloaddition	203
46.5.2.3	Method 3:	Six-Membered Rings by Cycloisomerization of 1,5-Enynes	205
46.5.2.4	Method 4:	Seven-Membered Rings by Cycloaddition or Cycloisomerization of Diynes	206
46.5.2.5	Method 5:	Codimerization Reaction between 1,3-Dienes and Alkynes	207
46.5.2.6	Method 6:	Cobalt-Mediated Syntheses of Alkaloids and Steroids	207
46.5.3		1,3-Dienes Having Two Exocyclic Double Bonds	210
46.5.3.1	Method 1:	Cyclization of Diynes	210
46.5.3.1.1	Variation 1:	Titanium-Promoted Cyclization of Diynes	210
46.5.3.1.2	Variation 2:	Zirconocene-Derivative-Promoted Cyclization of Diynes	211
46.5.3.1.3	Variation 3:	Nickel-Catalyzed Cyclization of Diynes	212
46.5.3.2	Method 2:	Cyclization of Enynes	213
46.5.3.2.1	Variation 1:	Palladium-Catalyzed Cycloisomerization of Enynes	214
46.5.3.2.2	Variation 2:	Ruthenium-Catalyzed Cycloisomerization of Enynes	215
46.5.3.2.3	Variation 3:	Iridium(I)-Catalyzed Cycloisomerization of Enynes	216
46.5.3.2.4	Variation 4:	Cobalt(I)-Mediated Cycloisomerization of 1,n-Enynes	217
46.5.3.3	Method 3:	Cyclization of Allenynes	218
46.5.4		Conjugated Vinylic Cycloalkenes	219
46.5.4.1	Method 1:	Cycloisomerization of 1,6-Enynes	219
46.5.4.1.1	Variation 1:	Palladium-Catalyzed Cycloisomerization To Give Vinylcyclopentenes	219
46.5.4.1.2	Variation 2:	Ruthenium-Catalyzed Cycloisomerization To Give Vinylcycloalkenes	220
46.5.4.1.3	Variation 3:	Platinum- and Gold-Catalyzed Cycloisomerization To Give Vinylcycloalkenes	221

46.5.4.1.4	Variation 4:	Iridium-Catalyzed Cycloisomerization To Give Vinylcycloalkenes	223
46.5.4.2	Method 2:	Cycloisomerization of Allenynes	224
46.5.4.2.1	Variation 1:	Platinum-Catalyzed Cycloisomerization To Give Vinylcycloalkenes	224
46.5.4.2.2	Variation 2:	Gold- and Platinum-Catalyzed Cycloisomerization To Give Cross-Conjugated Trienes	225
46.5.4.2.3	Variation 3:	Rhodium-Catalyzed Isomerization To Give Cross-Conjugated Trienes	225
46.5.4.2.4	Variation 4:	Titanium(II)-Mediated Cyclization To Give Cross-Conjugated Trienes	226
46.5.4.2.5	Variation 5:	Cobalt(I)-Mediated Cyclization To Give Cross-Conjugated Trienes	227
46.5.5		1,3-Dienes Having Endocyclic and Exocyclic Double Bonds	227
46.5.5.1	Method 1:	Cycloisomerization of 1,6- and 1,7-Enynes	228
46.5.5.1.1	Variation 1:	Palladium-Catalyzed Cycloisomerization	228
46.5.5.1.2	Variation 2:	Gold-Catalyzed Cycloisomerization	228
46.5.5.1.3	Variation 3:	Rhodium-Catalyzed Cycloisomerization	230
46.5.5.1.4	Variation 4:	Ruthenium-Catalyzed Cycloisomerization	231
46.5.5.2	Method 2:	Cycloisomerization of Allenynes	231
46.5.6		<i>s-trans</i> -Heteroannular 1,3-Dienes	232
46.5.6.1	Method 1:	Cycloisomerization of Dienynes	232
46.5.6.2	Method 2:	Cycloisomerization of Allenynes	232
46.6		Synthesis by Metal-Mediated Coupling Reactions E. Negishi and G. Wang	
46.6		Synthesis by Metal-Mediated Coupling Reactions	239
46.6.1	Method 1:	Stoichiometric Synthesis of 1,3-Dienes by Metal-Mediated Coupling Reactions via Migratory Insertion	244
46.6.1.1	Variation 1:	1,4-Disubstituted <i>E,E</i> -1,3-Dienes by [2C + 2C] Alkenyl–Alkenyl Coupling via Organoboron Migratory Insertion Reactions	245
46.6.1.2	Variation 2:	1,4-Disubstituted <i>E,Z</i> -1,3-Dienes by [2C + 2C] Alkynyl–Alkenyl Coupling via Organoboron Migratory Insertion Reactions	246
46.6.1.3	Variation 3:	1,4-Disubstituted <i>Z,Z</i> -1,3-Dienes by [2C + 2C] Alkynyl–Alkynyl Coupling via Boron- or Zirconium-Mediated Migratory Insertion	247
46.6.1.4	Variation 4:	Other Organozirconium Migratory Insertion Reactions for the Synthesis of 1,3-Dienes	248
46.6.2	Method 2:	Stoichiometric Synthesis of 1,3-Dienes by Metal-Mediated [2C + 2C] Coupling via Carbometalation	249
46.6.2.1	Variation 1:	Synthesis of 1,3-Dienes by Controlled Alkyne Dimerization via <i>syn</i> -Carbometalation	251
46.6.2.2	Variation 2:	Chelation-Guided <i>anti</i> -Carbometalation with Alkenyl- and Alkynylmetals	252

46.6.2.3	Variation 3:	Zirconium-Promoted Ene–Yne Coupling and Alkyne Dimerization	252
46.6.2.4	Variation 4:	Titanium-Promoted Ene–Yne Coupling and Alkyne Dimerization	255
46.6.3	Method 3:	Synthesis of 1,3-Dienes by Palladium-Catalyzed Cross-Coupling Reactions	256
46.6.3.1	Variation 1:	1,3-Dienes Containing the Parent Vinyl and/or 1-Monosubstituted Vinyl Groups	266
46.6.3.2	Variation 2:	1,4-Disubstituted 1,3-Dienes	271
46.6.3.3	Variation 3:	Trisubstituted 1,3-Dienes Excluding Those Containing a Vinyl or Vinylidene Group	275
46.6.3.4	Variation 4:	Tetrasubstituted 1,3-Dienes Excluding Those Containing a Fully Substituted Alkenyl Group	285
46.6.3.5	Variation 5:	Tetra-, Penta-, and Hexasubstituted 1,3-Dienes Containing One or Two Fully Substituted Alkenyl Groups Excluding 1,1,2,3-Tetrasubstituted 1,3-Dienes	287
46.6.4	Method 4:	1,3-Dienes through Modification of 4C Compounds	290
46.6.4.1	Variation 1:	1,3-Dienes via Heterofunctionalized 1,3-Dienes	290
46.6.4.2	Variation 2:	1,3-Dienes via 1,3-Enynes and 1,3-Diynes	300
46.6.5	Method 5:	Synthesis of 1,3-Dienes by Catalytic Carbometalation and Oxymetalation Reactions	308
46.6.5.1	Variation 1:	1,3-Dienes via the Heck Reaction	308
46.6.5.2	Variation 2:	Other Catalytic Carbopalladation Routes to 1,3-Dienes	315
46.6.5.3	Variation 3:	1,3-Dienes via Oxymetalation Reactions	326
46.6.6	Method 6:	Synthesis of 1,3-Diene-Containing Oligoenes and Oligoenynes of Natural Origin and Related Compounds	332
46.7	Synthesis by Cycloaddition and Electrocyclic Reactions		
	M. Shindo, T. Yoshikawa, and K. Yaji		
46.7	Synthesis by Cycloaddition and Electrocyclic Reactions		353
46.7.1	Method 1:	Thermal Electrocyclic Ring-Opening Reactions of Cyclobutenes	353
46.7.1.1	Variation 1:	Acyclic 1,3-Dienes from 3,4-Unsubstituted Cyclobutenes	354
46.7.1.2	Variation 2:	Acyclic 1,3-Dienes from 3-Substituted Cyclobutenes	356
46.7.1.3	Variation 3:	Acyclic 1,3-Dienes from Multisubstituted Cyclobutenes	359
46.7.1.4	Variation 4:	Cycloalka-1,3-dienes from 3,4-Fused Cyclobutenes (Ring Expansion)	364
46.7.1.5	Variation 5:	1,3-Dienes from 1,2-Fused Cyclobutenes	368
46.7.1.6	Variation 6:	1,3-Dienes from 1,4-Fused Cyclobutenes	369
46.7.2	Method 2:	Photochemical Reactions of Cyclobutenes	370
46.7.3	Method 3:	Thermal Six-Electron Electrocyclizations To Give Cyclohexa-1,3-dienes	371
46.7.3.1	Variation 1:	Cyclohexa-1,3-dienes from Acyclic 1,3,5-Trienes	374
46.7.3.2	Variation 2:	1,6-Fused Cyclohexa-1,3-dienes from 1,2-Fused 1,3,5-Trienes	377
46.7.3.3	Variation 3:	1,2-Fused Cyclohexa-1,3-dienes from 2,3-Fused 1,3,5-Trienes	380

46.7.3.4	Variation 4:	2,3-Ring-Fused Cyclohexa-1,3-dienes from 3,4-Ring-Fused 1,3,5-Trienes	382
46.7.3.5	Variation 5:	5,6-Fused Cyclohexa-1,3-dienes from Cycloalka-1,3,5-trienes ·	383
46.7.4	Method 4:	Photochemical Six-Electron Electrocyclizations	385
46.7.5	Method 5:	Unsaturated Carbocycles via a Combination of Thermally Induced Electrocyclizations	386
46.7.6	Method 6:	[6 + 4] Cycloadditions between Buta-1,3-dienes and Hexa-1,3,5-trienes	389
46.7.6.1	Variation 1:	[6 + 4] Cycloadditions of Tropones	389
46.7.6.2	Variation 2:	[6 + 4] Cycloadditions of Fulvenes	394
46.8	Synthesis by Extrusion		
	R. S. Grainger and P. J. Jervis		
<hr/>			
46.8	Synthesis by Extrusion		401
46.8.1	Extrusion of Alkenes		401
46.8.1.1	Method 1: Thermal Cracking of Cyclohexene		401
46.8.1.2	Method 2: Extrusion of Cyclopentadiene		402
46.8.1.2.1	Variation 1: Cracking of Dicyclopentadiene		402
46.8.1.2.2	Variation 2: Cyclopentadiene as a Protecting Group		402
46.8.1.3	Method 3: Extrusion of Maleic Anhydride		403
46.8.2	Extrusion of Carbon Dioxide		404
46.8.2.1	Method 1: Carbon Dioxide Extrusion from Six-Membered Lactones		404
46.8.2.2	Method 2: Carbon Dioxide Extrusion with In Situ Trapping of the Diene ·		405
46.8.2.3	Method 3: Carbon Dioxide Extrusion from Vinyl-Substituted β -Lactones ·		406
46.8.2.3.1	Variation 1: Decarboxylative Extrusion from β -Lactones		406
46.8.2.3.2	Variation 2: Tandem Lactone Formation–Carbon Dioxide Extrusion		407
46.8.3	Extrusion of Carbon Monoxide		408
46.8.3.1	Method 1: Carbon Monoxide Extrusion from Monocyclic Cyclopent-3-en-1-ones		408
46.8.3.2	Method 2: Extrusion of a Bridging Carbon Monoxide from Strained Rings		409
46.8.3.3	Method 3: Carbon Monoxide Extrusion with In Situ Trapping of the Diene		410
46.8.3.4	Method 4: Carbon Monoxide Extrusion To Afford Cyclooctatetraenes ·		411
46.8.3.5	Method 5: Carbon Monoxide Extrusion from β -Allenyl Aldehydes		411
46.8.4	Extrusion of Sulfur Dioxide		412
46.8.4.1	Method 1: Thermal Extrusion of Sulfur Dioxide from 2,5-Dihydrothiophene 1,1-Dioxides		412
46.8.4.1.1	Variation 1: Preparation of 1,4-Disubstituted 1,3-Dienes via Thermolysis ·		413
46.8.4.1.2	Variation 2: Preparation of Terminal 1,3-Dienes via Thermolysis		415
46.8.4.1.3	Variation 3: Preparation of 2,3-Disubstituted 1,3-Dienes via Thermolysis ·		416
46.8.4.1.4	Variation 4: Preparation of Other Substitution Patterns via Thermolysis ·		418
46.8.4.2	Method 2: Thermolysis Followed by In Situ Trapping		418
46.8.4.2.1	Variation 1: Intermolecular Diels–Alder Trapping of the Diene		419
46.8.4.2.2	Variation 2: Intramolecular Diels–Alder Trapping of the Diene		420

46.8.4.2.3	Variation 3:	Other In Situ Trapping Reactions	421
46.8.4.3	Method 3:	Extrusion from Cyclic Sulfones in the Presence of Lithium Aluminum Hydride	422
46.8.4.4	Method 4:	Reaction of Cyclic Sulfones with Ultrasonically Dispersed Potassium	423
46.8.4.4.1	Variation 1:	Using Standard Conditions	423
46.8.4.4.2	Variation 2:	In the Presence of a Proton Source	424
46.8.4.5	Method 5:	Tandem Retro-Diels–Alder/Sulfur Dioxide Extrusion from Cyclic Sulfones	425
46.8.4.6	Method 6:	Photochemical Extrusion of Sulfur Dioxide from 2,5-Dihydrothiophene 1,1-Dioxides	426
46.8.4.7	Method 7:	Extrusion from In Situ Generated Thiirane 1,1-Dioxides (The Ramberg–Bäcklund Reaction)	427
46.8.4.7.1	Variation 1:	Hexa-1,3,5-trienes from Diallylic Sulfones	427
46.8.4.7.2	Variation 2:	Terminal 1,3-Dienes via The Vinylogous Ramberg–Bäcklund Reaction	428
46.8.4.7.3	Variation 3:	Application of the Ramberg–Bäcklund Reaction to an Iterative Ring-Growing Procedure	429
46.8.4.8	Method 8:	Base-Induced Isomerization and Thermal Elimination of 2,3-Dihydrothiophene 1,1-Dioxides	430
46.8.4.9	Method 9:	Extrusion from Cyclic Sulfinat Esters	431
46.8.4.10	Method 10:	1,3,5-Trienes from 2,7-Dihydrothiepin 1,1-Dioxides	432
46.8.4.10.1	Variation 1:	Synthesis of Open-Chain 1,3,5-Trienes	432
46.8.4.10.2	Variation 2:	Synthesis of Cyclodecatetraenes	433
46.8.4.10.3	Variation 3:	Synthesis of Cyclooctatetraenes	433
46.8.5		Extrusion of Nitrogen	434
46.8.5.1	Method 1:	Dienes from 2,5-Dihydro-1 <i>H</i> -pyrroles	435
46.8.5.2	Method 2:	Extrusion of Nitrogen from Hydrazine-Derived Azo Compounds	435
46.8.5.3	Method 3:	Extrusion of Nitrogen from Pyridazine-Derived Azo Compounds	436
46.8.6		Extrusion of 4-Phenyl-3 <i>H</i> -1,2,4-triazole-3,5(4 <i>H</i>)-diones and Related Molecules	436
46.8.6.1	Method 1:	Extrusion of 4-Phenyl-3 <i>H</i> -1,2,4-triazole-3,5(4 <i>H</i>)-dione by Thermolysis	437
46.8.6.2	Method 2:	Extrusion of 4-Phenyl-3 <i>H</i> -1,2,4-triazole-3,5(4 <i>H</i>)-dione in the Presence of a Reducing Agent	439
46.8.6.3	Method 3:	Extrusion from Related Diazines	441
46.9		Synthesis by Elimination M. P. Schramm	
46.9		Synthesis by Elimination	445
46.9.1		Synthesis by 1,2-Elimination	445
46.9.1.1	Method 1:	Elimination of Hydrogen and a Heteroatom	446
46.9.1.1.1	Variation 1:	Dehydrohalogenation	446

46.9.1.1.2	Variation 2:	Dehydration	448
46.9.1.1.3	Variation 3:	Loss of Acetic Acid or Trifluoroacetic Acid	457
46.9.1.1.4	Variation 4:	Loss of a Sulfonic Acid	460
46.9.1.1.5	Variation 5:	Loss of Hydrogen and an Alkoxy or Aryloxy Group	463
46.9.1.1.6	Variation 6:	Loss of Hydrogen and an Arylsulfinyl Group	464
46.9.1.1.7	Variation 7:	Loss of Hydrogen and a Selenium-Containing Group	465
46.9.1.1.8	Variation 8:	Loss of Hydrogen and a Nitrogen-Containing Group	468
46.9.1.2	Method 2:	Elimination of a Silicon-Containing Group and a Heteroatom	468
46.9.1.2.1	Variation 1:	Loss of Silicon- and Oxygen-Bearing Groups	469
46.9.1.2.2	Variation 2:	Loss of Silicon- and Nitrogen-Containing Groups	471
46.9.1.3	Method 3:	Elimination of a Carbon Fragment and a Heteroatom-Containing Group	472
46.9.1.3.1	Variation 1:	Loss of Acetic Acid and Carbon Dioxide	472
46.9.1.3.2	Variation 2:	Grob Fragmentation	473
46.9.1.4	Method 4:	Elimination of Two Heteroatoms or Heteroatom-Containing Groups	475
46.9.1.4.1	Variation 1:	Loss of an Oxygen-Containing Group and a Halogen Atom	475
46.9.1.4.2	Variation 2:	Dehalogenation	476
46.9.1.4.3	Variation 3:	Loss of Nitrate and Acetate (or Methanesulfonate)	477
46.9.1.5	Method 5:	Elimination of a Shared Atom Such as Oxygen or Sulfur	477
46.9.1.5.1	Variation 1:	Expulsion of Oxygen from Oxiranes	477
46.9.1.5.2	Variation 2:	Desulfurization of Thiiranes	478
46.9.2		Synthesis by 1,4-Elimination	479
46.9.2.1	Method 1:	Elimination of Hydrogen and a Heteroatom	479
46.9.2.1.1	Variation 1:	Elimination of a Hydrogen Halide	480
46.9.2.1.2	Variation 2:	Elimination of Water or Its Equivalent	481
46.9.2.1.3	Variation 3:	Elimination of Hydrogen and an Oxygen Atom Bonded to Carbon	485
46.9.2.1.4	Variation 4:	Elimination of Acetic Acid	489
46.9.2.1.5	Variation 5:	Elimination of Benzenesulfinic Acid	490
46.9.2.1.6	Variation 6:	Elimination of Hydrogen and Oxygen from Peroxides	491
46.9.2.2	Method 2:	Elimination of Two Carbon Atoms	492
46.9.2.3	Method 3:	Elimination of a Carbon Fragment and a Heteroatom	493
46.9.2.4	Method 4:	Elimination of Two Bromine Atoms or Two Heteroatom-Containing Groups	493
46.9.2.4.1	Variation 1:	Elimination of Two Bromine Atoms	493
46.9.2.4.2	Variation 2:	Elimination of Two Oxygen-Containing Groups	495
46.9.2.5	Method 5:	Elimination of a Shared Heteroatom or Group	501
46.9.2.5.1	Variation 1:	Elimination of Carbon Monoxide	501
46.9.2.5.2	Variation 2:	Elimination of a Shared Oxygen Atom	502
46.9.2.5.3	Variation 3:	Elimination of Sulfur Dioxide	502
46.9.3		Synthesis by 1,2,3,4-Elimination	503
46.9.3.1	Method 1:	Elimination of Two Hydrogens and Two Heteroatoms or Heteroatom-Containing Groups	503
46.9.3.1.1	Variation 1:	Double Dehydrobromination	503
46.9.3.1.2	Variation 2:	Double Dehydrochlorination	506

46.9.3.1.3	Variation 3:	Double Dehydroiodination	507
46.9.3.1.4	Variation 4:	Double Dehydration	508
46.9.3.1.5	Variation 5:	Dehydroxylation–Desulfonylation by the Loss of Acetoxy and Benzenesulfonate Functions	510
46.9.3.2	Method 2:	Elimination of Four Bromine Atoms	514
46.9.3.3	Method 3:	Elimination of Two Hydrogen Atoms and a Shared Oxygen Atom	514
46.9.4		Synthesis by Other Elimination Procedures	516
46.9.4.1	Method 1:	Elimination of Sulfur Dioxide via Variations of the Ramberg–Bäcklund Reaction	516
46.9.4.2	Method 2:	Elimination of 4-Methylpyridin-2-amine from <i>N</i> -[1-[4-(Dimethylamino)phenyl]pent-4-enyl]-4-methylpyridin-2-amine Using Rhodium(I)	517
46.9.4.3	Method 3:	Elimination by Zeolite NaY	517
46.9.4.4	Method 4:	Conversion of Propargyl Ethers into 1,3-Dienes	517
46.10		Synthesis by Reduction	
		D. J. Ramón and M. Yus	
46.10		Synthesis by Reduction	523
46.10.1		Synthesis from Enynes	523
46.10.1.1	Method 1:	Hydrogenation Reactions	523
46.10.1.1.1	Variation 1:	Using the Lindlar Catalyst	523
46.10.1.1.2	Variation 2:	Using a Poisoned Lindlar Catalyst	527
46.10.1.1.3	Variation 3:	Using the Rosenmund Catalyst	528
46.10.1.1.4	Variation 4:	Using a Palladium on Charcoal Catalyst	530
46.10.1.1.5	Variation 5:	Using Raney Nickel Catalyst	530
46.10.1.1.6	Variation 6:	Using the P-2 Nickel Catalyst	531
46.10.1.2	Method 2:	Hydrometalation Reactions	532
46.10.1.2.1	Variation 1:	Hydroboration	533
46.10.1.2.2	Variation 2:	Hydroalumination	534
46.10.1.3	Method 3:	Other Reduction Processes	537
46.10.1.3.1	Variation 1:	Using Hydrazine	537
46.10.1.3.2	Variation 2:	Using Metallic Zinc	537
46.10.2		Synthesis from Diynes	541
46.10.2.1	Method 1:	Hydrogenation Reactions	541
46.10.2.2	Method 2:	Hydrometalation Reactions	541
46.10.2.3	Method 3:	Reduction Using Metallic Zinc	542
46.10.3		Synthesis from Arenes	543
46.10.3.1	Method 1:	Birch Reductions	543
46.10.3.2	Method 2:	Hydride Addition	544

46.11	Synthesis by Isomerization of Unconjugated Dienes, Allenes, Alkynes, and Methylenecyclopropanes R. E. Taylor, C. R. Diène, and E. M. Daly	
46.11	Synthesis by Isomerization of Unconjugated Dienes, Allenes, Alkynes, and Methylenecyclopropanes	549
46.11.1	Isomerization of Unconjugated Dienes	549
46.11.1.1	Method 1: Base-Mediated Isomerization	549
46.11.1.1.1	Variation 1: Of Unfunctionalized Unconjugated Dienes	549
46.11.1.1.2	Variation 2: Of Functionalized Unconjugated Dienes	550
46.11.1.2	Method 2: Acid-Mediated Isomerization	551
46.11.1.3	Method 3: Electron-Transfer-Mediated Isomerization	552
46.11.1.4	Method 4: Metal-Mediated Isomerization	553
46.11.1.4.1	Variation 1: Palladium-Catalyzed Isomerization	553
46.11.1.4.2	Variation 2: Europium-Catalyzed Isomerization	554
46.11.1.4.3	Variation 3: Zirconocene-Mediated Skeletal Rearrangements	555
46.11.1.4.4	Variation 4: Titanium-Mediated Skeletal Rearrangement	556
46.11.1.5	Method 5: Isomerization by Sigmatropic Rearrangements	557
46.11.1.5.1	Variation 1: Thermally Induced Sigmatropic Rearrangements	557
46.11.1.5.2	Variation 2: Palladium(II)-Assisted Cope Rearrangements	559
46.11.1.6	Method 6: Isomerization by Allylic Substitution Reactions	559
46.11.1.6.1	Variation 1: Palladium(0)-Mediated Substitution of Doubly Allylic Acetates and Carbonates	559
46.11.1.6.2	Variation 2: Rearrangements Mediated by Thionyl Chloride	561
46.11.1.7	Method 7: Isomerization by Other Processes	563
46.11.2	Isomerization of Allenes	563
46.11.2.1	Method 1: Acid-Catalyzed Isomerization	563
46.11.2.2	Method 2: Metal-Catalyzed Isomerization	565
46.11.2.3	Method 3: Thermally and Photochemically Induced Isomerization	568
46.11.2.3.1	Variation 1: Thermal Rearrangements of Polyenes	568
46.11.2.3.2	Variation 2: Photochemical Rearrangements of 1,2,6-Trienes	569
46.11.2.3.3	Variation 3: [1,5]-Sigmatropic Shifts of Vinylallenes	569
46.11.3	Isomerization of Alkynes	571
46.11.3.1	Method 1: Base-Catalyzed Isomerization	571
46.11.3.2	Method 2: Metal-Catalyzed Isomerization	571
46.11.3.2.1	Variation 1: Of Aliphatic Alkynes	571
46.11.3.2.2	Variation 2: Of Ynones	574
46.11.3.3	Method 3: Thermally Induced Rearrangements	577
46.11.3.3.1	Variation 1: Cope Rearrangements of Enynes	578
46.11.3.3.2	Variation 2: Thermally Induced Rearrangements of Propargyl Vinyl Ethers	578
46.11.3.4	Method 4: Organocatalyzed Isomerization of Ynones	581
46.11.4	Isomerization of Methylenecyclopropanes	583
46.11.4.1	Method 1: Transition-Metal-Catalyzed Isomerization of Methylenecyclopropanes	583

46.11.4.1.1	Variation 1:	Under Stoichiometric Conditions	583
46.11.4.1.2	Variation 2:	Under Catalytic Conditions	584
46.12	Synthesis from Arenes and Polyenes		
	Y.-S. Wong		
46.12	Synthesis from Arenes and Polyenes 589		
46.12.1	Method 1:	Reductive Dearomatization of Arenes by Addition of Organolithiums Followed by Electrophilic Trapping	591
46.12.1.1	Variation 1:	Of Electron-Withdrawing Carbon-Substituted Arenes with Alkyl Organolithium Species	591
46.12.1.2	Variation 2:	Of Alkenyl-Substituted Arenes with Alkenyl Organolithium Species	594
46.12.1.3	Variation 3:	Of Sulfone-Substituted Arenes	595
46.12.1.4	Variation 4:	Of Sulfonamide-Substituted Arenes	595
46.12.1.5	Variation 5:	Of Phosphinamide-Substituted Arenes	596
46.12.2	Method 2:	Alkylation of <i>ortho</i> -Substituted Phenols	596
46.12.2.1	Variation 1:	Of Alkali Metal Phenolate Salts	596
46.12.2.2	Variation 2:	Of Arenoxasulfonium Ylides by [2,3]-Sigmatropic Rearrangement	599
46.12.3	Method 3:	Alkenylation of <i>ortho</i> -Alkyl-Substituted Phenols	600
46.12.4	Method 4:	Arylation of <i>ortho</i> -Alkyl-Substituted Phenols	601
46.12.5	Method 5:	Alkynylation of <i>ortho</i> -Alkyl-Substituted Phenols	602
46.12.6	Method 6:	Hydroxylation of <i>ortho</i> -Alkyl-Substituted Phenols (Synthesis of <i>o</i> -Quinols)	603
46.12.7	Method 7:	Alkoxylation of <i>ortho</i> -Alkyl-Substituted Phenols (Synthesis of <i>o</i> -Quinol Ethers)	608
46.12.7.1	Variation 1:	Of 2-(Hydroxymethyl)phenols To Give Spiroepoxycyclohexa-2,4-dien-1-ones	608
46.12.7.2	Variation 2:	To Give 6-Alkoxy-6-alkylcyclohexa-2,4-dien-1-ones	609
46.12.8	Method 8:	Acyloxylation of <i>ortho</i> -Alkyl-Substituted Phenols (Synthesis of <i>o</i> -Quinol Acetates)	609
46.12.9	Method 9:	Addition of Oximes to <i>ortho</i> -Alkyl-Substituted Phenols (Synthesis of <i>o</i> -Quinol Oximes)	612
46.12.10	Method 10:	Alkoxylation of <i>ortho</i> -Alkoxy-Substituted Phenols (Synthesis of <i>o</i> -Quinone Acetals)	613
46.12.11	Method 11:	Acyloxylation of <i>ortho</i> -Alkoxy-Substituted Phenols (Synthesis of <i>o</i> -Quinone Alkoxy Acetates)	615
46.12.12	Method 12:	Diacyloxylation of Phenols (Synthesis of <i>o</i> -Quinone Diacetates)	616
46.12.13	Method 13:	Amination of <i>ortho</i> -Alkyl-Substituted Phenol Derivatives	617
46.12.14	Method 14:	Alkylation of <i>ortho</i> -Alkyl-Substituted Aniline Derivatives	619
46.12.14.1	Variation 1:	By Hetero-Claisen Rearrangement of <i>N</i> -Arylhydroxylamine Derivatives	619
46.12.14.2	Variation 2:	By Imino-Diels–Alder Reaction	619
46.12.15	Method 15:	Alkenylation of <i>ortho</i> -Alkyl-Substituted Anilines	620

46.12.16	Method 16:	Hydroxylation of <i>ortho</i> -Alkyl-Substituted Anilines (Synthesis of <i>o</i> -Quinol Imines)	620
46.12.17	Method 17:	Acyloxylation of <i>ortho</i> -Alkyl-Substituted Aniline Derivatives (Synthesis of <i>o</i> -Quinol Imide Acetates)	621
46.12.17.1	Variation 1:	By Wessely Oxidation	621
46.12.17.2	Variation 2:	By Rearrangement of <i>N</i> -Arylhydroxylamine Derivatives	621
46.12.18	Method 18:	Amidation of <i>ortho</i> -Alkyl-Substituted Aniline Derivatives (Synthesis of <i>o</i> -Quinol Imide Amides)	622
46.12.19	Method 19:	<i>cis</i> -Cyclohexanediols by Enzymatic Dihydroxylation of Arenes ..	623
46.12.20	Method 20:	Alkylations of Polyenes	626
46.12.20.1	Variation 1:	Cyclopropanation	626
46.12.20.2	Variation 2:	Hydrozirconation	626
46.12.20.3	Variation 3:	Nickel-Catalyzed Polyene–Aldehyde Reductive Coupling Reaction with Triethylborane	627
46.12.20.4	Variation 4:	Cobalt-Catalyzed Polyene–Alkyl Halide–[(Trimethylsilyl)methyl]magnesium Chloride Coupling Reaction	627
46.12.21	Method 21:	Epoxidation of Polyenes	628
46.12.21.1	Variation 1:	Juliá–Colonna Asymmetric Epoxidation	628
46.12.21.2	Variation 2:	Chiral Manganese(III)–salen Catalyzed Epoxidation	628
46.12.21.3	Variation 3:	Chiral-Dioxirane-Catalyzed Epoxidation	629
46.12.22	Method 22:	Dihydroxylation of Polyenes	630
46.13	Synthesis via Metal Complexes of Dienes		
	I. Bauer and H.-J. Knölker		
46.13	Synthesis via Metal Complexes of Dienes		637
46.13.1	Release of 1,3-Dienes by Demetalation of Tricarbonyl(1,3-diene)iron Complexes		637
46.13.1.1	Method 1:	Oxidative Demetalation	637
46.13.1.2	Method 2:	Ligand Exchange	637
46.13.2	Isomerization of 1,4-Dienes		639
46.13.2.1	Method 1:	Synthesis via Intermediate Tricarbonyl(1,3-diene)iron Complexes	639
46.13.3	Acylation of Tricarbonyl(1,3-diene)iron Complexes		640
46.13.3.1	Method 1:	Intermolecular Acylation	640
46.13.3.2	Method 2:	Intramolecular Acylation	642
46.13.4	Palladium-Catalyzed Coupling of Substituted (1,3-Diene)iron Complexes		642
46.13.5	Cyclization of (1,3-Diene)iron Complexes with Pendent Double Bonds		642
46.13.6	Oxidative Cyclization of (1,3-Diene)metal Complexes		643
46.13.6.1	Method 1:	Oxidative Cyclization of Tricarbonyl(1,3-diene)iron Complexes	644
46.13.6.2	Method 2:	Oxidative Cyclization of Cyclohexa-1,3-diene(cyclopentadienyl)cobalt Complexes	645
46.13.7	Modification at the Periphery of Tricarbonyl(η^4 -1,3-diene)iron Complexes		646

46.13.7.1	Method 1:	Nucleophilic Addition to Carbonyl and Heterocarbonyl Functions Adjacent to Tricarbonyl(η^4 -1,3-diene)iron Complexes	646
46.13.7.1.1	Variation 1:	Addition to Aldehydes	646
46.13.7.1.2	Variation 2:	Addition to Imines	647
46.13.7.1.3	Variation 3:	Addition to Ketones	648
46.13.7.1.4	Variation 4:	Addition to Carboxylic Acid Derivatives	650
46.13.7.2	Method 2:	Reactions at Groups Other Than Carbonyl or Heterocarbonyl Adjacent to Tricarbonyl(η^4 -1,3-diene)iron Complexes	651
46.13.7.2.1	Variation 1:	Reaction of Electrophiles with Tricarbonyl(dienoate)iron or Tricarbonyl(dienone)iron Complexes	651
46.13.7.2.2	Variation 2:	Addition to Tricarbonyl(η^4 -triene)iron Complexes	652
46.13.7.2.3	Variation 3:	Substitution of Tricarbonyl(2,4-dien-1-ol)iron Derivatives	652
46.13.8		Reaction of (η^5 -Dienyl)metal Complexes with Nucleophiles	654
46.13.8.1	Method 1:	Reaction of Cyclic (η^5 -Dienyl)iron Complexes with Nucleophiles	654
46.13.8.2	Method 2:	Reaction of Acyclic (η^5 -Dienyl)iron Complexes with Nucleophiles	657
46.13.8.3	Method 3:	Reaction of Cyclic (η^5 -Dienyl)manganese Complexes with Nucleophiles	658
46.13.9		Reactions of (π -Allyl)tricarbonyliron Lactone Complexes	660
46.13.9.1	Method 1:	Modification at the Periphery of (π -Allyl)tricarbonyliron Lactone Complexes	660
46.13.10		Cyclopentadienones by Iron-Mediated [2 + 2 + 1] Cycloaddition	661
46.13.10.1	Method 1:	Reaction of Alkynes with Pentacarbonyliron	661
